Contents

01	What's in v0.4.1	The package, the numbers, installing	3
02	Lionstone Reels	One flow per brand, idea to delivery	4
03	Your brand identity	Measure, choose from the catalogue, remember	5
04	The workflow	plan.json, anchors, preview = export	7
05	Lionstone Styles	Your whole edit as a six-code recipe	8
06	Looks & colour	28 grades, colour controls, your own LUT	9
07	Effects, transitions, motion	The finishing toolbox	12
08	Text & captions	25 animated text presets, 3 caption styles	15
09	Reel FX Pack	12 one-command effects for Reels & Shorts	18
10	Build a Reel, step by step	A real 30-second Reel, every command	24
11	Recipes by content type	Podcast, real estate, product, tutorial...	27
12	Beyond the Reel	Agent, multicam, style learning, export, teams	28
13	Rules, QA & honest limits	Why your render is safe to post	29
14	Command cheat sheet	Everything on one page	30

145
presets in the catalog

104
ready to render today

79
catalogue options with pictures

0
keys, uploads or watermarks

How to read this handbook: chapters 1–9 explain each tool; chapter 10 puts them together in one Reel you can rebuild on your own footage. Commands are shown exactly as you type them. The illustrations are concept art; pages marked "real render" show actual Lionstone output.

01

What's in v0.4.1

Lionstone is an AI editing agent that runs on your computer. Pro and Studio used to be a paid plugin; since v0.3 every one of their features ships free in the open-source package. v0.4 adds Lionstone Reels, and v0.4.1 adds your brand identity and a visual catalogue. All of it is free: no license key, no account, no watermark, no upload.

The package at a glance

- **Smart editing**: speech-aware cuts, an explainable `plan.json`, editing by transcript, one-command restore.
- **Creative Suite**: looks, effects, transitions, motion and animated text, previewed with the same code that exports.
- **Lionstone Reels** NEW IN 0.4: a brand-specific Reels flow from topic to calendar.
- **Brand identity + catalogue** NEW IN 0.4.1: measured from your own videos, chosen by number and picture.
- **Reel FX Pack**: 12 effects built for vertical video, plus a 6.4-second showcase reel.
- **Shorts & Reels**: finds self-contained moments and renders them 9:16 with face-tracked framing.
- **Pro workflow**: multicam, style learning, FCPXML/EDL export.
- **Team tools**: brand kits, roles, locked presets, batch apply.
- **QA before delivery**: every render is decoded and checked before it's called deliverable.

Catalog by kind

KIND	READY	PLANNED
Looks (colour grades)	28	2
Effects	19	15
Reel FX	12	0
Transitions	11	14
Motion	6	7
Animated text	25	3
Caption styles	3	0
Total	**104**	**41**

"Planned" presets are listed in the catalog but never shipped as buttons that do nothing.

Install and check

```
# everything: creative presets, face tracking, MCP server
pip install "lionstone[all] @ git+https://github.com/ismailarslantas/lionstone"
lionstone doctor          # FFmpeg, speech recognition, fonts, optional extras
lionstone --version       # Lionstone · AI editing agent · v0.4.2
```

Labels, not locks. You'll see PRO and STUDIO on presets. They're catalog labels from the old plans; everything is free for individuals and teams alike. Coming from the paid plugin? `pip uninstall lionstone-pro`.

02

Lionstone Reels: idea to delivery

One flow per brand, in plain files you can read and undo. Claude writes the words, you shoot, Lionstone does the rest and measures it. No monthly fee, no per-video fee, no editing software.

```
Topic → Hook → Script → Shoot → Cut → Graphics → Sound → QA → Cover + caption → Calendar
```

The commands

```
lionstone reels start
lionstone reels brand init "Acme" --language en
lionstone reels new "Acme" "Rent or buy"
lionstone reels hooks "Acme" "rent" --angle mistake
lionstone reels lint projects/acme/<reel>
# put the footage in <reel>/raw/
lionstone reels make projects/acme/<reel>
lionstone reels schedule <reel> "2026-11-10 19:00"
lionstone reels calendar --brand "Acme" --ics cal.ics
```

What you get in delivery/

```
acme-rent-or-buy.mp4      # 9:16, -14 LUFS
cover-1.jpg … cover-3.jpg # for the 3:4 grid
caption.txt               # caption + hashtags
report.md · qa.md         # the verdict and why
```

Who does what

WHO	STEP
🧠 Claude	Topic, hooks (60 English and 60 Turkish templates, 10 angles), spoken script, caption. Lionstone checks them; it never invents copy.
🎥 You	The footage.
Lionstone	Cuts silences, fillers and repeats, word-by-word captions, hook title, brand colours, 31 original sound effects, music that ducks under the voice, covers, calendar.

Three verdicts

REPORT SAYS	MEANS
READY TO DELIVER	Every check that ran is clean, script matches ≥ 90%
NEEDS REVIEW	Script matches 75-90%, a repeat left, or no transcript to compare
FIX NEEDED	Script under 75%, clear text overflow, a technical fault or a copy error

Editing room. `edit/room.html` is a local page with the video and every word. Click a word to jump, cut it or restore it, double-click to fix a caption's spelling, then `lionstone reels make <reel> --keep-plan`. Nothing is uploaded.

File names shown are from 0.4.2, the patch that put help, reports and the guide in English. Reel folders from 0.4.0 and 0.4.1 (`ham/` , `kurgu/` , `teslim/`) keep working. On macOS, use a full FFmpeg: `brew install ffmpeg-full` .

03

Your brand identity · new in 0.4.1

Before the first Reel, Lionstone learns the brand and asks what to use. Afterwards it remembers.

1 · Measure your own videos

```
lionstone reels identity "Acme" --footage
talk.mp4 \
  --example a.mp4 --example b.mp4 --example
c.mp4
```

One talking-head take and 3-5 example Reels. Measured: tempo, cuts per minute, pauses, loudness, colour, palette, length, speech rate, opening lines. Music is an estimate. Contact sheets let Claude look at what can't be measured, and anything skipped is listed with the reason.

2 · Choose from the catalogue

```
lionstone reels catalog "Acme" --open
lionstone reels setup "Acme" --pick 0 205 503
```

Every option has a number and a picture. Click cards on the local page and copy the command, or type the numbers.

3 · Or let it decide

`x00` decides a group, `0` decides everything. Each automatic choice records its reason in the report. It never invents music: if your examples have music, it asks for your own licensed file.

4 · It remembers

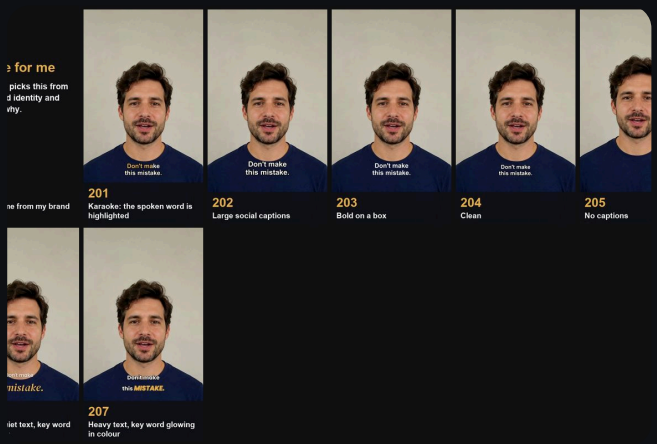

`lionstone reels start` and `make` offer **produce with my saved brand identity** or **prepare with a new brand identity**. A new identity archives the old one; nothing is deleted.

What the numbers choose

1xx Hook title	**7xx** Music level
2xx Captions	**8xx** Sound effects
3xx Colour	**9xx** Framing
4xx Pace	**10xx** Noise cleanup
5xx Effects	**11xx** Covers
6xx Music	**12xx** Accent colour

Two looks you can mix

Editorial: staggered titles in a large italic serif, quiet captions with one word set large, glass notification card, neon pills, countdown clock.
Bold: heavy captions with a glowing key word, glowing headline, dashed card, emphasis zooms.

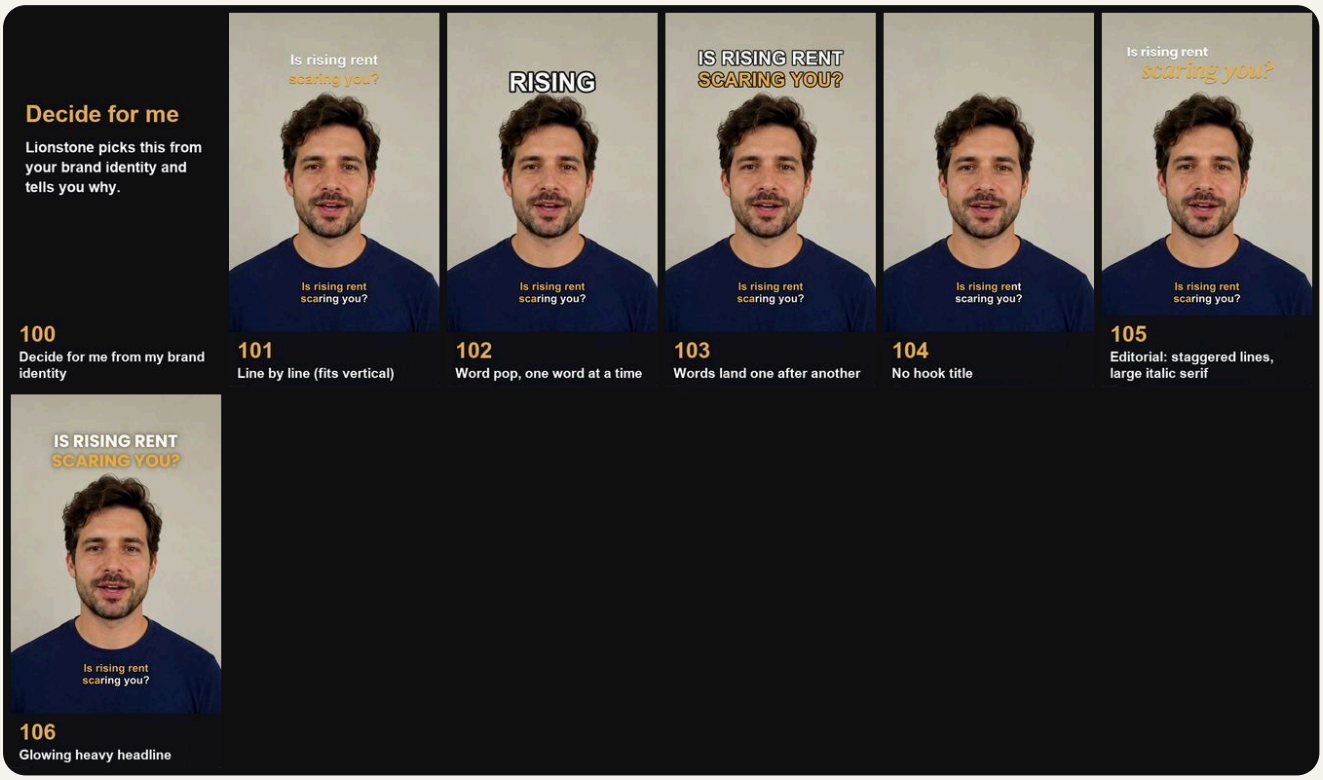

Real render: catalogue group 2xx. The man is a fictional example; your Reel is always made from your own footage.

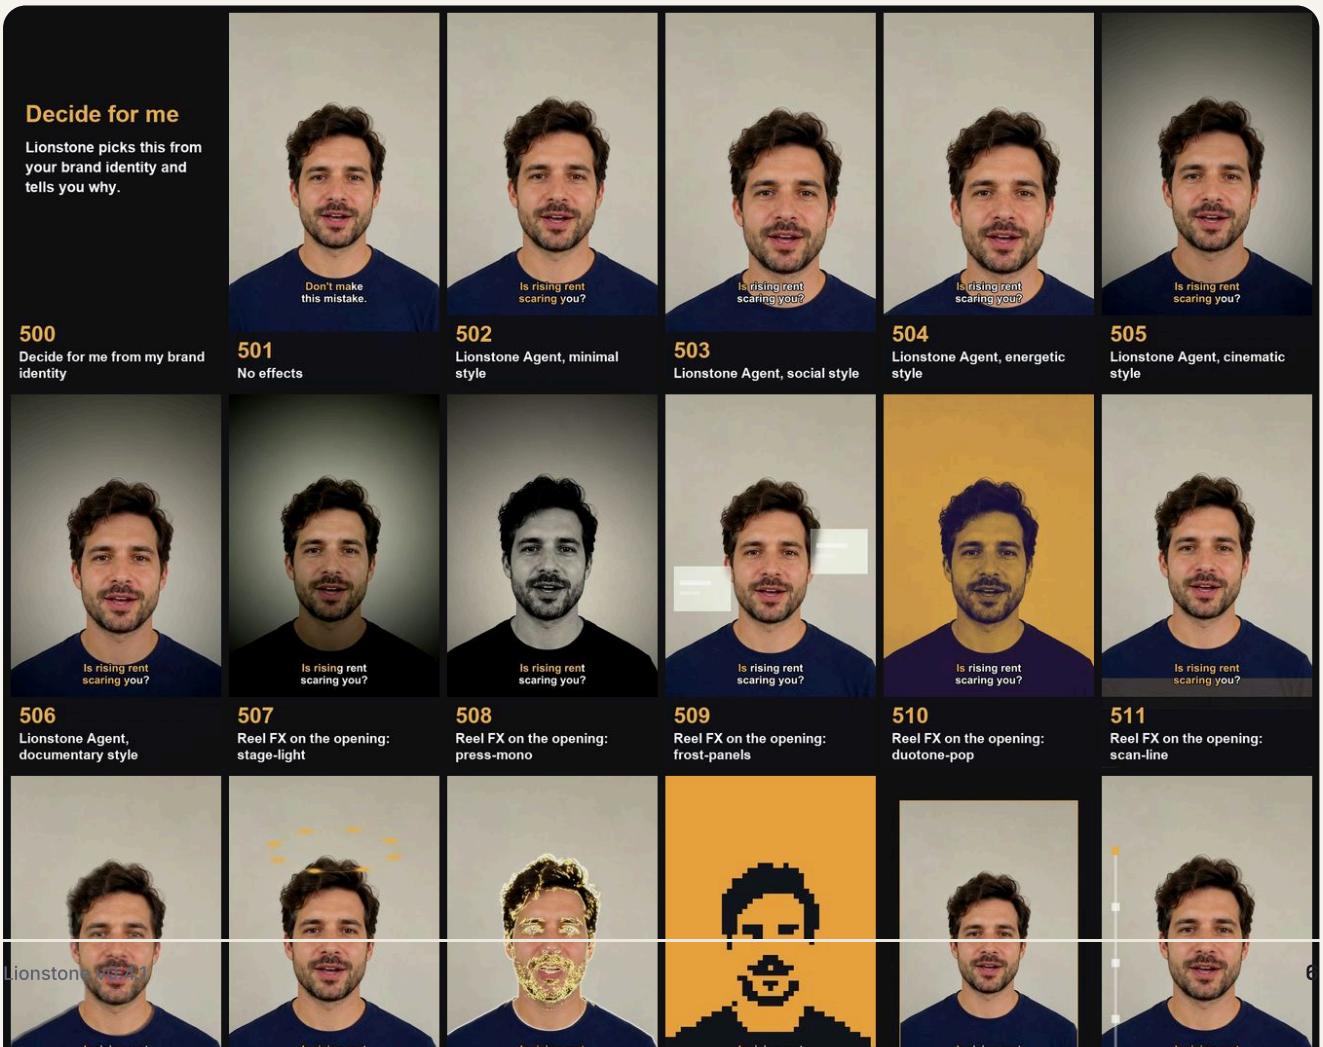

THE CATALOGUE · REAL RENDER

Choose by looking

Hook titles (1xx) and effects (5xx) from the real catalogue. 79 cards in all: picture options are real Lionstone renders, sound options are waveforms or spectrograms of real output.

Group 1xx: hook title.

04

The workflow

Every Lionstone edit is a plan first and a video second. You change the plan; the render follows.

Concept illustration: one recording becomes an edit, Reels and project files.

1. **Edit**: `lionstone edit talk.mp4` analyses speech, removes dead air and writes `talk_lionstone/plan.json`.
2. **Finish**: `lionstone fx …` adds looks, effects, text and transitions to that plan.
3. **Render + QA**: `lionstone fx render plan.json` compiles, renders and checks the result.
4. **Reuse**: `lionstone clips` cuts vertical Reels; `lionstone export` writes FCPXML/EDL.

Where a preset goes: anchors

ANCHOR	MEANS
`--global`	the whole video (looks, grain, captions)
`--segment N`	one kept segment
`--join N`	the cut after segment N (transitions)
`--source A-B`	seconds in the original recording
`--at S`	seconds in the finished video (text)

`lionstone fx segments plan.json` lists the numbered segments and cuts.

Preview = export. `lionstone fx preview <id> --before-after --gif` renders a real low-res sample with the same builder the export uses, so what you approve is what you get.

05

Lionstone Styles: your edit as a code

Seven groups, one letter each. Pick one option per group, and `lionstone styles --cmd` turns the code into the exact edit command.

GROUP	OPTIONS
O Opening	O1 Quiet Fade · O2 Slow Rise · O3 Hairline Reveal · O4 Light Sweep · O5 Film Grain Open · **O6 Kinetic Hook** · O7 Signature Stamp
W Words	W1 Clean Lines · W2 Bold Punch · **W3 Word Highlight** · W4 Silent Frame · W5 Sidecar Only (.srt/.vtt)
A Aspect	A1 Native · A2 Wide Stage 16:9 · **A3 Vertical Follow 9:16** · A4 Vertical Centre · A5 Square Follow · A6 Portrait Feed 4:5
G Grade	G1 Untouched · G2 Natural · G3 Warm Room · G4 Cool Studio · **G5 Punchy** · G6 Film
S Sound	S1 YouTube −14 · S2 Podcast −16 · S3 Broadcast −23 · **S4 Social −14 Tight** · S5 Rescue
P Pace	P1 Breathing Room · P2 Tidy · **P3 Tight**
L Labels	L1 Editorial Labels · L2 Spaced Chapters · L3 Line Chapters

The Reel code: O6 W3 A3 G5 S4 P3

```
lionstone styles --cmd O6 W3 A3 G5 S4 P3
# prints:
lionstone edit video.mp4 --title-effect P05 --captions burn --caption-style social \
  --aspect 9:16 --reframe face --color punchy --profile social \
  --denoise light --intensity dynamic
```

Starting recipes

Talking-head Reel

`O6 W3 A3 G5 S4 P3`

Fast hook, highlighted words, phone-friendly sound.

Podcast clip

`O1 W1 A2 G2 S2 P2 L1`

Calm, readable, loudness for audio apps.

Cinematic talk

`O4 W4 A2 G6 S1 P1 L2`

Slow, premium, no captions on the picture.

Corporate explainer

`O3 W1 A2 G4 S1 P2 L3`

Clean, cool and tidy.

`lionstone styles --open` opens the visual guide. A3 and A5 need face tracking: `pip install "lionstone[vision]"`.

06

Looks & colour

A look is one consistent grade for the whole video. Every look has an `intensity` that scales all its adjustments, and saturation is capped to protect skin tones.

Concept illustration: one frame, six grades.

FAMILY	LOOKS	BEST FOR
Natural	Natural Neutral · Clean Daylight · True-to-Life · Low Saturation	interviews, documentary
Cinematic	Warm Cinema · Cool Cinema · Muted Film	stories, brand films
Editorial	Soft Contrast · Matte Editorial	magazine-style talks
Warm / cool	Golden Hour · Warm Interior · Steel Blue · Cool Shadow	mood, tech topics
Retro & night	Analog Soft · Vintage Fade · Night Detail · Neon Balance	nostalgia, nightlife, music
Monochrome	Classic B&W · High-Contrast Mono	quotes, drama
Product & property	Product Neutral · Detail Pop · Bright Interior · Window Balance · Natural Exterior	e-commerce, real estate
Social	**Punchy Social** · Soft Skin-Safe	Reels, Shorts, TikTok

```
lionstone fx list --kind look
lionstone fx preview look-golden-hour --input talk.mp4 --start 20 --before-after
lionstone fx apply plan.json look-punchy-social --global --param intensity=0.7
lionstone fx apply plan.json color-controls --global   # manual: exposure, curves, temp/tint, vibrance…
lionstone fx apply plan.json lut --global              # your own .cube; its source/licence is recorded
```

One look per video. Pick a single grade and vary intensity instead of stacking looks; a Reel that changes colour every cut reads as a mistake, not a style.

GALLERY · LOOKS · REAL RENDER

Every look, on the same frame

Real `lionstone fx preview` renders at default intensity on one clip. Grades are deliberately subtle: they protect skin, so compare neighbours rather than expecting a filter.

Original
The untouched source frame, for comparison.

Natural Neutral
`look-natural-neutral`
Balanced, honest colour. Safe default.

Clean Daylight
`look-clean-daylight`
Fresh, slightly brighter daylight balance.

Warm Cinema
`look-warm-cinema`
Warm shadows, cinematic contrast.

Cool Cinema
`look-cool-cinema`
Cooler, moodier cinematic grade.

Muted Film
`look-muted-film`
Lower saturation, soft film curve.

Soft Contrast
`look-soft-contrast`
Gentle contrast for long talks.

Matte Editorial
`look-matte-editorial`
Lifted blacks, magazine feel.

True-to-Life
`look-true-to-life`
Documentary accuracy, minimal styling.

Low Saturation
`look-low-saturation`
Calm, desaturated and serious.

Golden Hour
`look-golden-hour`
Golden warmth, sunset glow.

Warm Interior
`look-warm-interior`
Cosy indoor warmth.

Steel Blue
`look-steel-blue`
Cool steel tones for tech topics.

Cool Shadow
`look-cool-shadow`
Blue shadows, neutral skin.

Analog Soft
`look-analog-soft`
Soft analogue warmth.

GALLERY · LOOKS · REAL RENDER

Every look, on the same frame (2)

Real `lionstone fx preview` renders at default intensity on one clip. Grades are deliberately subtle: they protect skin, so compare neighbours rather than expecting a filter.

Vintage Fade
`look-vintage-fade`
Faded, nostalgic print.

Night Detail
`look-night-detail`
Lifts detail in dark scenes.

Neon Balance
`look-neon-balance`
Keeps neon colour under control.

Classic B&W
`look-classic-bw`
Classic black and white.

High Contrast Mono
`look-high-contrast-mono`
Hard, dramatic monochrome.

Product Neutral
`look-product-neutral`
Accurate colour for products.

Detail Pop
`look-detail-pop`
Crisper texture and detail.

Bright Interior
`look-bright-interior`
Bright, airy rooms for property.

Window Balance
`look-window-balance`
Tames bright windows indoors.

Natural Exterior
`look-natural-exterior`
Natural greens and skies.

Punchy Social
`look-punchy-social`
Contrast and pop that read on phones.

Soft Skin Safe
`look-soft-skin-safe`
Flattering, skin-safe social look.

Colour Controls
`color-controls`
Manual grade: exposure, curves, temp, vibrance.

07

Effects, transitions, motion

The finishing toolbox. All of it is procedural FFmpeg filter math: no stock overlays, no bundled footage.

Effects: 19 ready

GROUP	PRESETS AND WHAT THEY DO
Light	**Soft Bloom** glow around highlights · **Light Leak** warm drifting washes · **Halation** red film glow at bright edges · **Haze** soft atmospheric lift
Focus & zoom	**Smooth Zoom** eased, face-safe · **Quick Punch-In** emphasis on a key line · **Focus Pull** rack focus in/out · **Directional Blur** · **Motion Blur**
Texture	**Film Grain** · **VHS Texture** · **Film Burn** · **Subtle Glitch** (max 3 bursts/s) · **Chromatic Shift**
Frame	**Soft Vignette** · **Letterbox** · **Beat Flash** (on beats or every N s)
Clean-up	**Exposure Balance** · **Noise Reduction** · **Stabilization** (partial: single-pass deshake)

Transitions: 11 ready

`hard-cut` `dip-to-black` `dip-to-white` `fade-through-color` `whip-pan` `zoom-through` `light-leak-flash` `film-burn-flash` `blur-cut` `glitch-cut` `rgb-shift-cut`

Transitions sit on a cut: `--join N` or `--all-joins`. For Reels, `zoom-through` and `whip-pan` keep energy up; `blur-cut` hides a topic change gently.

Motion: 6 ready

`gentle-push-in` `slow-pull-back` `ken-burns-pan` `vertical-drift` `product-hero-reveal` `keyframe-transform`

`keyframe-transform` takes your own keyframes for scale, X/Y and rotation, with six easing curves.

```
lionstone fx apply plan.json quick-punch-in --source 12.4-14.0
lionstone fx apply plan.json zoom-through --join 2
lionstone fx apply plan.json keyframe-transform --segment 3 \
  --keyframes '{"zoom":[{"t":0,"v":1},{"t":2,"v":1.2}]}'
```

GALLERY · EFFECTS · REAL RENDER

The finishing effects, rendered

Each frame is a real preview of the effect at its default settings, captured mid-window.

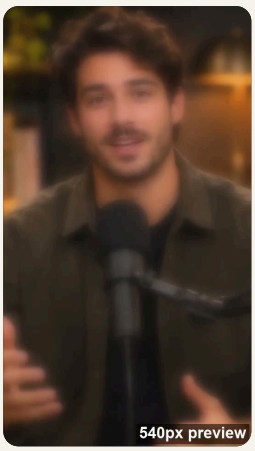

Soft Bloom
`soft-bloom`
Gentle glow around highlights.

Light Leak
`light-leak`
Warm drifting light washes.

Halation
`halation`
Red film glow at bright edges.

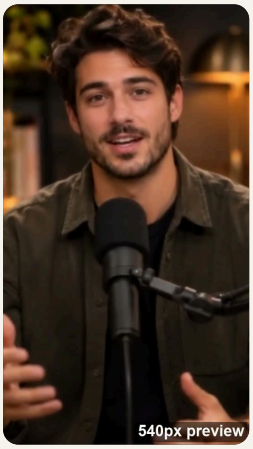

Haze
`haze`
Soft atmospheric lift; dreamy.

Smooth Zoom
`smooth-zoom`
Slow eased zoom, face kept in frame.

Quick Punch In
`quick-punch-in`
Fast push-in to stress a line.

Focus Pull
`focus-pull`
Rack focus soft to sharp.

Directional Blur
`directional-blur`
Motion blur along an angle.

Motion Blur
`motion-blur`
Frame-blend motion trail.

Film Grain
`film-grain`
Organic temporal grain.

VHS Texture
`vhs-texture`
Chroma bleed, noise, tape softness.

Film Burn
`film-burn`
Orange burn swelling in and out.

Subtle Glitch
`subtle-glitch`
Sparse RGB-split bursts (≤3/s).

Chromatic Shift
`chromatic-shift`
Constant red/blue channel offset.

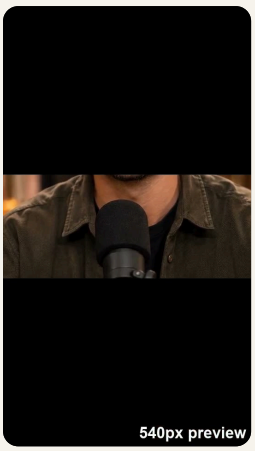

Soft Vignette
`soft-vignette`
Darkens edges, keeps the face.

GALLERY · EFFECTS · REAL RENDER

The finishing effects, rendered (2)

Each frame is a real preview of the effect at its default settings, captured mid-window.

Letterbox
`letterbox`
Cinema bars (made for 16:9).

Beat Flash
`beat-flash`
Short brightness hits on beats.

Exposure Balance
`exposure-balance`
Gentle, highlight-safe exposure fix.

Noise Reduction
`noise-reduction`
Temporal + spatial denoise.

Transitions, frame by frame

Before the cut · on the cut · after the cut. Applied with `--join N`.

Zoom Through
`zoom-through`
Punch in to the cut, settle out after it.

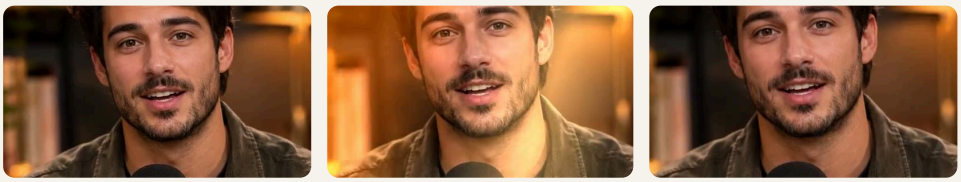

Whip Pan
`whip-pan`
The cut hides in a fast blurred pan.

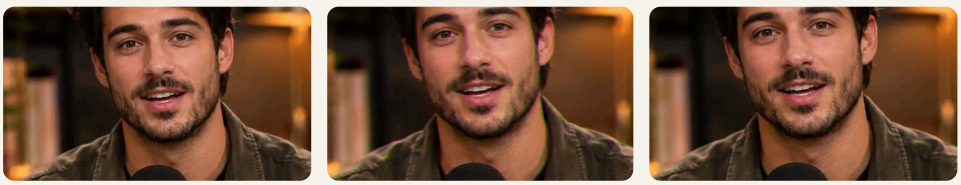

Light Leak Flash
`light-leak-flash`
Warm light wash peaks on the cut.

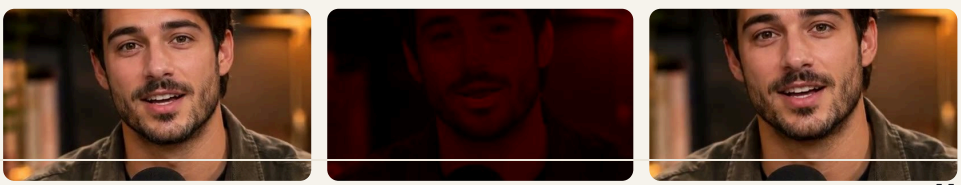

Film Burn Flash
`film-burn-flash`
Orange burn flare hides the cut.

Glitch Cut
`glitch-cut`
Brief RGB split and noise across the cut.

Dip to Black
`dip-to-black`
Out to black and back in.

08

Text & captions

25 animated text presets for titles, numbers, labels and calls to action, plus 3 caption styles. Text is placed by finished-video time with `--at`.

USE	PRESETS
Titles	Editorial Fade · Minimal Rise · Tracking Reveal · Line Reveal · Chapter Card · Mask Reveal · Soft Light Sweep · Depth Title · Film Title
Hooks	**Word Pop** one word at a time · **Staggered Words** · **Phrase Build** · **Type-On**
Numbers	**Counter Up** · **Price Reveal** (optional old price) · **Stat Emphasis**
Labels	Speaker Label · Pin Label · Name & Role · Location Label · Minimal Info Bar
Brand & CTA	Logo Reveal · Brand Lockup (uses the brand kit) · Signature End Card · **Call to Action**

Caption styles

Clean Captions
White, outlined, bottom-safe. Works everywhere.

Active Word
The word being spoken pops in the accent colour. Made for Reels.

Karaoke
Words fill with colour as they're spoken.

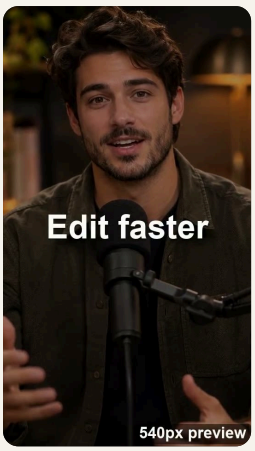

```
lionstone fx text plan.json word-pop --text "3 edits that save hours" --at 1.2 --duration 2.5
lionstone fx text plan.json counter-up --text "hours saved" --at 14.5 --param to=12
lionstone fx text plan.json price-reveal --text "$249,000" --at 8
lionstone fx text plan.json cta --text "Follow for part 2" --subtext "New tips every week" --at 26
lionstone fx apply plan.json caption-active-word --global
```

Readable by rule. Every text preset stays on screen at least as long as it takes to read, respects a minimum font size and stays inside the safe area. Captions are a separate layer, so titles never fight them. Text needs an FFmpeg build with `drawtext`; without it Lionstone skips text with a clear message.

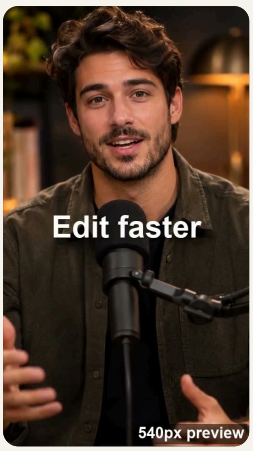

GALLERY · TEXT · REAL RENDER

Animated text, rendered

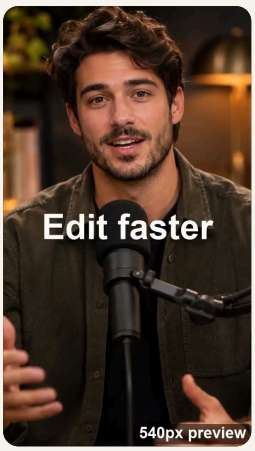

Captured while each preset is on screen. Placed with `lionstone fx text plan.json <id> --text "…" --at S`.

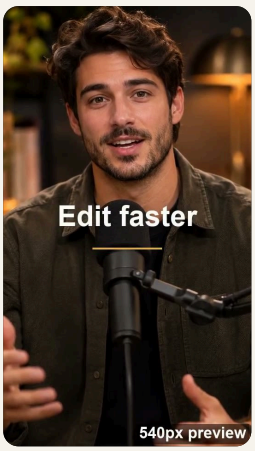

Editorial Fade
`editorial-fade`
Soft fade with background dim.

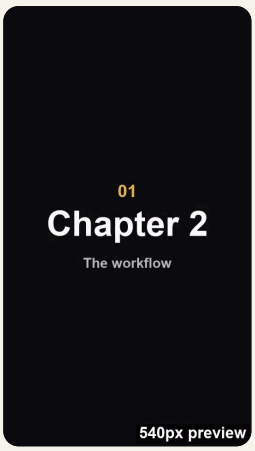

Minimal Rise
`minimal-rise`
Title rises gently and settles.

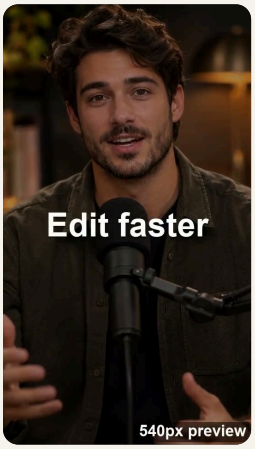

Tracking Reveal
`tracking-reveal`
Letter spacing eases wide to normal.

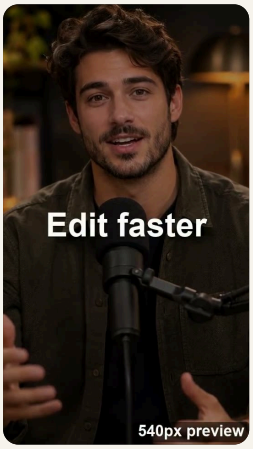

Line Reveal
`line-reveal`
A rule opens under the title.

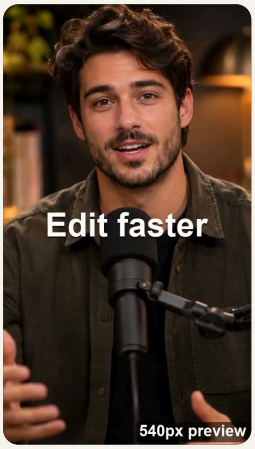

Chapter Card
`chapter-card`
Full-frame chapter card.

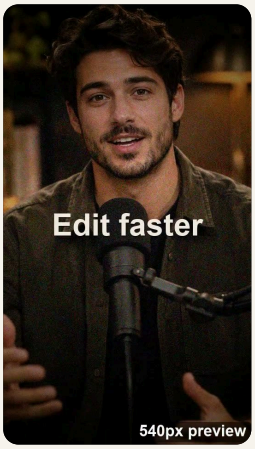

Mask Reveal
`mask-reveal`
Footage shows through the letters.

Soft Light Sweep
`soft-light-sweep`
A sheen sweeps across the title.

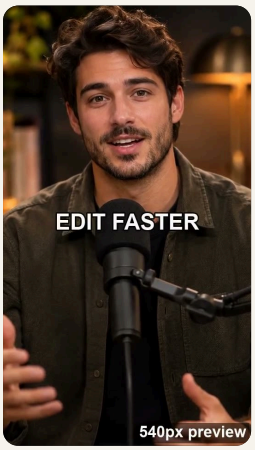

Depth Title
`depth-title`
Parallax depth title.

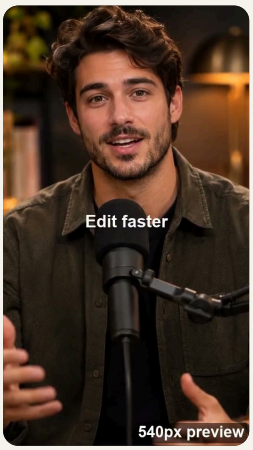

Film Title
`film-title`
Title in grain and vignette.

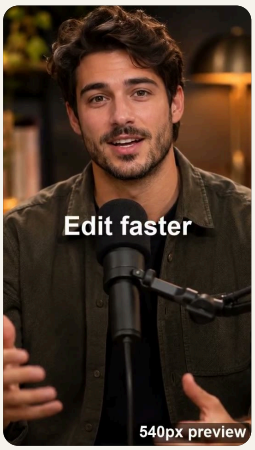

Word Pop
`word-pop`
One word at a time, springy.

Staggered Words
`staggered-words`
Words land in sequence; last in accent.

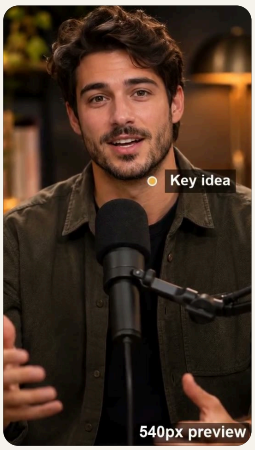

Phrase Build
`phrase-build`
Lines build one after another.

Type On
`type-on`
Types on with a cursor.

Speaker Label
`speaker-label`
Names the current speaker.

Pin Label
`pin-label`
Dot + label on a point of interest.

GALLERY · TEXT · REAL RENDER

Animated text, rendered (2)

Captured while each preset is on screen. Placed with `lionstone fx text plan.json <id> --text "…" --at S`.

Logo Reveal
`logo-reveal`
Signature brand open/close.

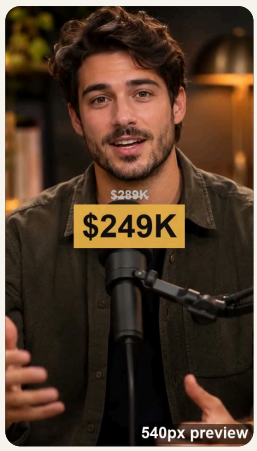

Brand Lockup
`brand-lockup`
Brand name + tagline from the kit.

End Card
`end-card`
Title, subtitle and CTA end card.

Counter Up
`counter-up`
A number counts up to a value.

Price Reveal
`price-reveal`
Price pops on a panel; old price optional.

Stat Emphasis
`stat-emphasis`
Big figure + label.

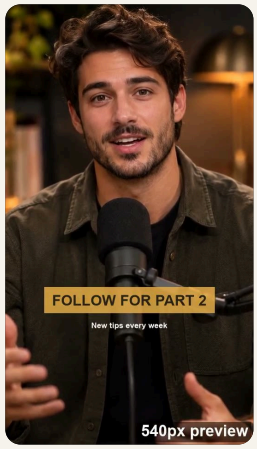

Name Role
`name-role`
Name + role lower third.

Location Label
`location-label`
Pin glyph + place name.

Info Bar
`info-bar`
Full-width info bar.

CTA
`cta`
Button-style call to action.

09

Reel FX Pack • since 0.3.2

Twelve effects built for vertical video. Each is one command, works on 9:16, 1:1 and 16:9, and renders with the same FFmpeg code in preview and export.

Reel FX Pack — real renders

Same clip, 12 one-command effects. Each frame comes from the exact FFmpeg code used for export.

Real render. The same clip through all 12 effects, straight from the export code.

Two families

- **8 creative effects** PRO : looks and overlays for hooks, quotes and highlights.
- **4 brand-aware effects** STUDIO : layouts whose colours come from your brand kit (defaults: ink #14161C, gold #E8A33D).

Every name, look and parameter is original to Lionstone; the licence field reads `lionstone-original`.

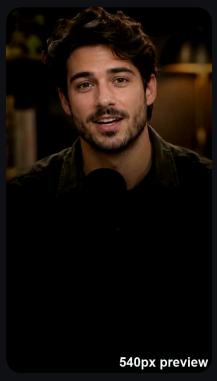

```
# 1 browse
lionstone fx list --category reel-fx
lionstone fx show stage-light
# 2 real preview
lionstone fx preview stage-light --before-after --gif
# 3 apply, then render
lionstone fx apply plan.json stage-light --source 0-3.5
lionstone fx render plan.json
```

Parameters are validated (type, range, colour format). Invalid values are rejected, never guessed. Effects only act inside their window; outside it the clip is untouched. `x`, `y` and `radius` are fractions of the frame (0 = left/top, 1 = right/bottom).

GALLERY · REEL FX · REAL RENDER

All 12 Reel FX on one clip

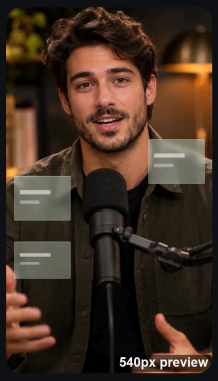

Real renders with the settings shown under each frame: `lionstone fx apply plan.json <id> …`

Stage Light
`stage-light`
The room goes dark, you stay lit.
`--source 1.2-3.7 --param y=0.22`

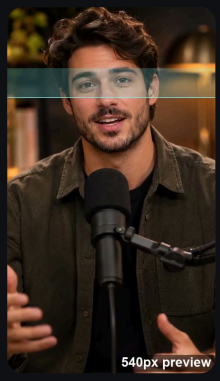

Press Mono
`press-mono`
You, printed in tomorrow's paper.
`--source 41-47`

Frost Panels
`frost-panels`
Glass cards float beside you.
`--param panels=3`

Duotone Pop
`duotone-pop`
Two colours, zero noise.
`--source 0-1.5`

Scan Line
`scan-line`
A light beam reads the frame.
`--param speed=0.6`

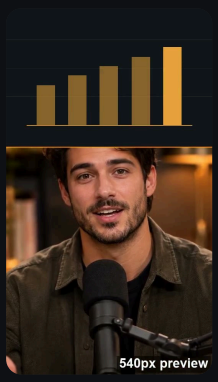

Afterimage
`afterimage`
Every move leaves a trail.
`--param decay=0.9`

Halo Orbit
`halo-orbit`
A ring of light circles your head.
`--param y=0.1 --param radius=0.22`

Neon Outline
`neon-outline`
Neon traces your silhouette.
`--param detail=0.5`

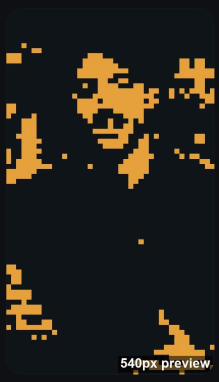

Insight Split
`insight-split`
Your numbers on top, you below.
`--param values=0.3,0.55,0.9`

Brand Frame
`brand-frame`
Your clip, framed in your brand.
`--param inset=0.84`

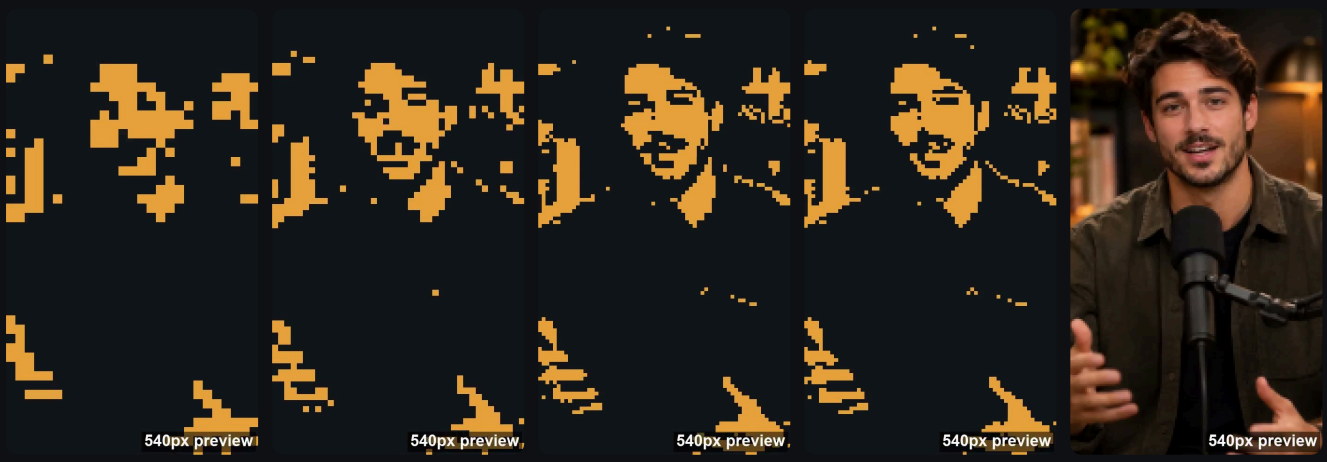

Progress Rail
`progress-rail`
A rail fills as you count steps.
`--param steps=5`

Pixel Resolve
`pixel-resolve`
Your shot assembles out of pixels.
`--source 0-1.2`

pixel-resolve, frame by frame

Left to right, about 0.15 s apart: five pixel stages resolve into the clean shot.

CREATIVE EFFECTS · 1 OF 2

Hooks, quotes and highlights

Concept illustration: stage-light, neon-outline, halo-orbit and scan-line.

`stage-light` LOW

The room goes dark, you stay lit.

PARAMS	`intensity` 0.7 · x 0.5 · y 0.36 · `size` 0.5
USE	Podcast hooks, the sentence that matters, a reveal.
SET	intensity 0.6–0.8; y on the eye line (≈0.3–0.4 in 9:16).
TIP	Only on the 3–5 s hook line. Darkness that lasts the whole clip stops being an event.

`press-mono` LOW

You, printed in tomorrow's paper.

PARAMS	`intensity` 0.8 · `grain` 0.4 · `paper` #F2EAD8
USE	Quotes, founder stories, “breaking news” hooks.
SET	intensity 0.7–0.9, grain 0.3–0.5; warmer paper #EFE2C8 feels archival.
TIP	Pair with `stat-emphasis` or `word-pop` for a stamped headline.

`frost-panels` MEDIUM

Glass cards float beside you.

PARAMS	`panels` 2 (1–3) · `frost` 0.6 · `tint` #FFFFFF
USE	2–3 takeaways, feature lists, “three things” tutorials.
SET	2 panels to compare, 3 to list; tint with a brand colour.
TIP	Put 2–3 words on each card with `pin-label` or `phrase-build`.

`duotone-pop` LOW

Two colours, zero noise.

PARAMS	`intensity` 1.0 · `shadow` #1A1238 · `highlight` #FF8A3D
USE	Promos, intros, outros, thumbnails, brand series.
SET	Strong brightness contrast between the two colours; 0.6 for a softer tint.
TIP	Use it for the first 1–2 s, then cut to natural. The change is the hook.

CREATIVE EFFECTS · 2 OF 2

Motion, light and outline

scan-line

MEDIUM

A light beam reads the frame.

PARAMS	`intensity` 0.7 · `speed` 0.6 sweeps/s (0.2–2) · `color` #7CF5FF
USE	AI and tech explainers, “let's analyse this”, before/after.
SET	speed 0.5–0.8 for one or two calm passes.
TIP	Window length = 1 / speed gives exactly one deliberate scan.

afterimage

MEDIUM

Every move leaves a trail.

PARAMS	`intensity` 0.8 · `decay` 0.92 (0.5–0.99)
USE	Energetic hooks, gestures, music, product spins.
SET	decay 0.88–0.95; higher means longer trails.
TIP	Trails come from bright areas: lit subject, darker background. A still frame shows nothing.

halo-orbit

MEDIUM

A ring of light circles your head.

PARAMS	`color` #FFD27A · x 0.5 · y 0.2 · `radius` 0.3 · `dots` 8 (3–12) · `speed` 0.3 rev/s
USE	“Big idea” moments, thought leadership, intros.
SET	y 0.15–0.25, radius 0.25–0.35, dots 6–8, speed 0.2–0.4.
TIP	It's drawn in front of you; on close-ups keep it above the eyes.

neon-outline

MEDIUM

Neon traces your silhouette.

PARAMS	`intensity` 0.75 · `detail` 0.5 · `color` #FF4FD8
USE	Tech, gaming, music, stylised promos, section transitions.
SET	detail 0.3–0.5 in busy rooms, 0.6+ on clean backdrops.
TIP	A clean background makes the silhouette the hero.

Typical commands

```
lionstone fx apply plan.json scan-line  --source 12.0-16.5 --param color=#7CF5FF
lionstone fx apply plan.json halo-orbit --source 30-34 --param dots=6 --param y=0.18
lionstone fx apply plan.json afterimage --source 4.0-6.0 --param decay=0.9
lionstone fx preview halo-orbit --input talk.mp4 --start 12 --param dots=6
```

Pair, don't pile. One Reel FX effect plus one look plus captions reads as a style. Three effects on the same second reads as noise, and the effect budget won't allow it anyway (see chapter 13).

BRAND-AWARE EFFECTS

Your numbers, your frame, your opener

These four take their colours as parameters, so a brand kit sets them once for the whole team.

Concept illustration: insight-split, brand-frame and pixel-resolve.

`insight-split` MEDIUM

Your numbers on top, you below.

PARAMS	`split` 0.38 · `bars` 5 (2–7) · `values` · `bg` · `accent`
USE	Results, growth, market data, prices.
TIP	Pass real data: `values=0.3,0.55,0.9`; add `counter-up` for the number.

`brand-frame` LOW

Your clip, framed in your brand.

PARAMS	`inset` 0.84 (0.7–0.95) · `bg` · `accent`
USE	Series formats, quotes, guest intros, client reels.
TIP	Inset 0.8–0.88 leaves room for a title and captions. Put it in a team preset.

`progress-rail` LOW

A rail fills as you count the steps.

PARAMS	`steps` 5 (2–8) · `side` left/right/top · `track` · `accent`
USE	Tutorials, listicles, recipes, checklists.
TIP	Steps = points you make; `side=top` with captions at the bottom.

`pixel-resolve` HIGH

Your shot assembles out of pixels.

PARAMS	`duration` 1.2 s (0.4–3) · `tone_a` · `tone_b`
USE	Openers, reveals, scene changes, brand intros.
TIP	A 1–2 s window after a cut (`--source 0-1.5`) makes every episode start the same way.

FX SHOWCASE REEL

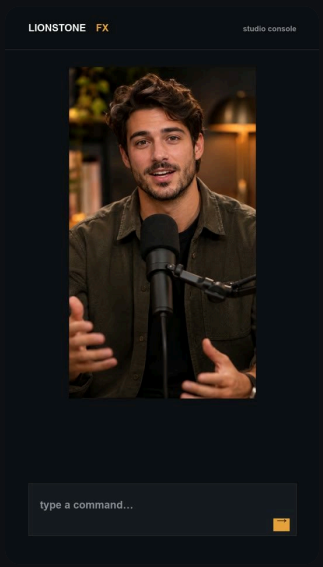

One command, one clip, one effect

`lionstone fx showcase` turns any effect into a 6.4-second, 1080×1920, 30 fps vertical reel in Lionstone's console design. It's a ready-made post for “I edited this with one command”.

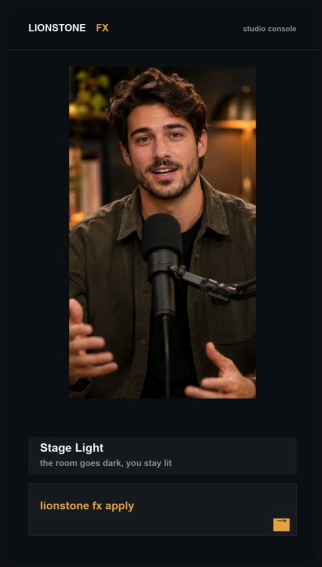

```
lionstone fx showcase stage-light talk.mp4 -o stage-light-reel.mp4
lionstone fx showcase halo-orbit talk.mp4 --start 12 --param dots=6
```

The real showcase reel · Real render

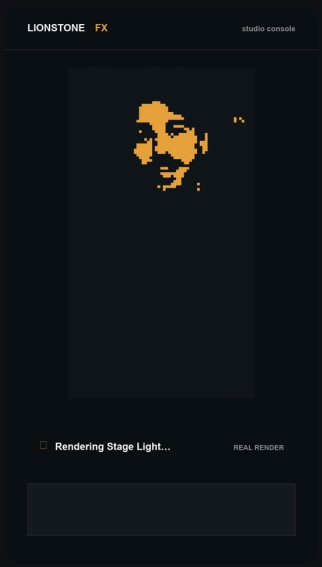

Output of `lionstone fx showcase stage-light talk.mp4 --param y=0.22`.

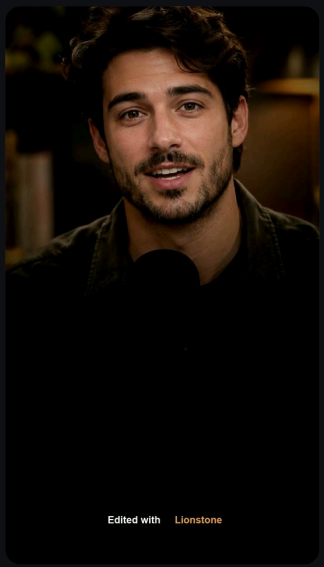

0.5 s
Console, your clip in a card.

1.8 s
The command types itself.

3.1 s
The clip dissolves through pixels.

5.2 s
The real render fills the screen.

TIME	WHAT THE VIEWER SEES
0.00–1.00 s	Lionstone console, your clip in a card, a blinking cursor
1.00–2.50 s	`lionstone fx apply <effect>` types itself; a card shows the effect's name and promise
2.50–3.80 s	“Rendering... REAL RENDER” while the clip dissolves through the gold/ink pixel dither
3.80–6.40 s	The real render fills the screen with an “Edited with Lionstone” pill; hold

Make it a series

- Keep the input clip identical across posts. The same “before” makes a numbered series comparable.
- One post per effect gives you 12 posts from one recording.
- The “after” is rendered by the export builder, so the reel never shows a mock result.

6.4 s
fixed length, loops cleanly

1080×1920
vertical, 30 fps

1
command per post

10

Build a Reel, step by step

The brief: a 30-second vertical Reel from one talking-head recording, titled “3 edits that save hours”. Hook in the first second, three takeaways, one number, a clear call to action.

Concept storyboard: pixel opener → stage-light hook → three glass cards → data split → progress rail → call to action.

Beat sheet

TIME	BEAT	TOOL	WHY
0.0–1.2	Opener	`pixel-resolve`	A branded first frame stops the scroll
1.2–3.7	Hook line	`stage-light` + `word-pop`	Light and words land on the promise
3.7	First cut	`zoom-through`	Keeps momentum into the content
8.1–13.4	Three takeaways	`frost-panels` (3)	A list the eye can count
13.5–19.8	Proof	`insight-split` + `counter-up`	Numbers make it believable
19.8	Cut	`glitch-cut`	A beat before the steps
19.8–25.1	Steps	`progress-rail` (3, top)	Shows progress, keeps viewers to the end
26.0–29.8	Close	`cta`	One clear next action
all	Base	`look-punchy-social` + `caption-active-word`	Reads on phones; works with sound off

THE COMMANDS

From recording to Reel

Times: `--source` uses seconds in the original recording; `--at` uses seconds in the finished Reel. Run `lionstone fx segments` to see how they line up after the dead air is removed.

```
# 1 · edit vertically with face tracking, then see the segments
lionstone edit talk.mp4 --aspect 9:16 --reframe face --profile social
lionstone fx segments talk_lionstone/plan.json
P=talk_lionstone/plan.json

# 2 · base: one look + word-highlight captions
lionstone fx apply $P look-punchy-social --global --param intensity=0.7
lionstone fx apply $P caption-active-word --global

# 3 · opener and hook
lionstone fx apply $P pixel-resolve --source 0-1.2 --param duration=1.0
lionstone fx apply $P stage-light   --source 1.2-3.7 --param intensity=0.75 --param y=0.34
lionstone fx text  $P word-pop --text "3 edits that save hours" --at 1.2 --duration 2.5
lionstone fx apply $P zoom-through --join 0

# 4 · content: takeaways, proof, steps
lionstone fx apply $P frost-panels  --source 10.4-15.7 --param panels=3
lionstone fx apply $P insight-split --source 16.9-23.2 --param values=0.25,0.5,0.9
lionstone fx text  $P counter-up --text "hours saved" --at 14.5 --duration 4 --param to=12
lionstone fx apply $P glitch-cut --join 3
lionstone fx apply $P progress-rail --source 24.1-29.4 --param steps=3 --param side=top

# 5 · close, check, render
lionstone fx text  $P cta --text "Follow for part 2" --subtext "New tips every week" --at 26 --
duration 3.8
lionstone fx applied $P
lionstone fx render $P
```

Verified with v0.3.2. This exact sequence was run on a 35-second 1080×1920 test recording: rendered 1080×1920 at 30 fps, 29.8 s long, and QA reported *17 checks run, 4 skipped (reported), no issues: deliverable*.

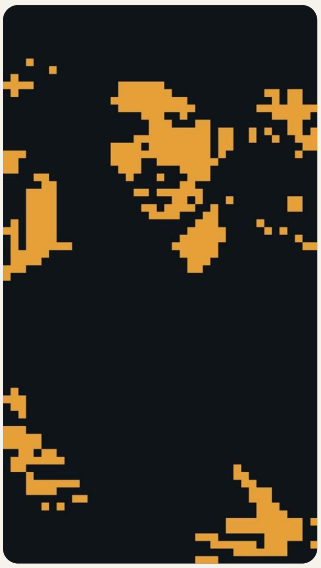

Polish passes

- **Change a value:** `lionstone fx set $P <instance-id> --param intensity=0.6`, then render again.
- **Remove one:** `lionstone fx remove $P <instance-id>`. IDs are listed by `fx applied`.
- **Post a teaser:** `lionstone fx showcase stage-light talk.mp4` for a 6.4 s companion clip.

CHAPTER 10 · THE RESULT · REAL RENDER

The finished Reel, frame by frame

The exact command sequence from the previous pages, rendered on this handbook's presenter clip (1080×1920; QA: deliverable, 17 checks run, 4 skipped and reported). Every frame below is real output; captions are absent only because the test clip has no speech.

0.3 s
`pixel-resolve`
Opener: the shot assembles out of pixels.

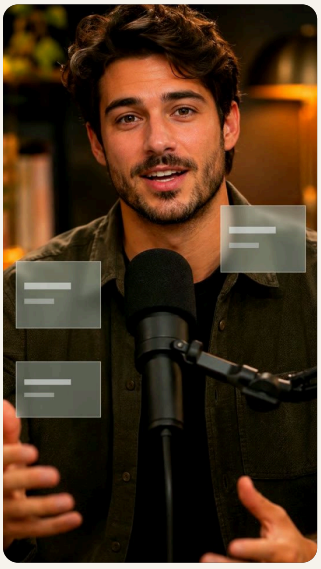

0.7 s
`pixel-resolve`
The pixels resolve into the clean shot.

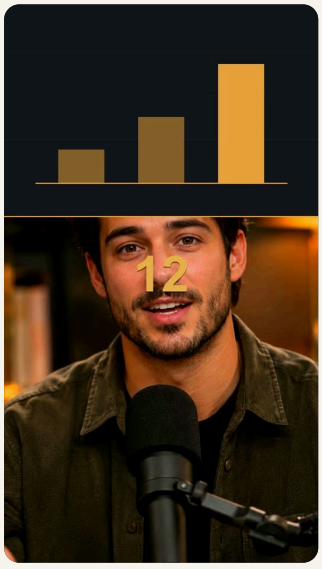

2.6 s
`stage-light + word-pop`
Hook: the room dims, the promise pops in.

3.9 s
`zoom-through`
First cut, carried by a zoom.

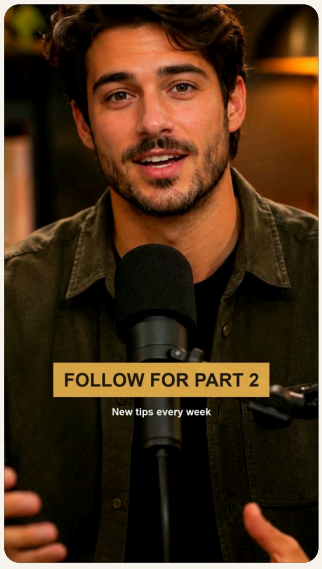

10.5 s
`frost-panels`
Three takeaways on glass cards.

16.5 s
`insight-split + counter-up`
Proof: bars rise, the number counts up.

22.5 s
`progress-rail`
Steps: the rail fills as you count.

27.5 s
`cta`
Close: one clear call to action.

11

Recipes by content type

Starting points that respect the effect budget. Swap times for your own; keep the structure.

Podcast clip

Code `O1 W1 A2 G2 S2 P2 L1` for the episode; for the Reel, cut it with `clips`.

```
lionstone clips plan.json -n 5 --aspect
9:16 --reframe face
lionstone fx apply $P stage-light --
source 0-3.5
```

Quote card

Documentary feel, one stamped headline.

```
lionstone fx apply $P press-mono --source
41.2-47.0
lionstone fx text $P word-pop --text "…"
--at 1
```

Real-estate tour

Bright rooms, a price, a location.

```
lionstone fx apply $P look-bright-
interior --global
lionstone fx apply $P vertical-drift --
segment 2
lionstone fx text $P price-reveal --text
"$249,000" --at 8
lionstone fx text $P location-label --
text "Old Town" --at 3
```

Product launch

Neutral colour, hero move, duotone intro.

```
lionstone fx apply $P look-product-
neutral --global
lionstone fx apply $P duotone-pop --
source 0-1.5
lionstone fx apply $P product-hero-reveal
--segment 1
```

Tutorial / listicle

Count the steps, label each one.

```
lionstone fx apply $P progress-rail --
source 30-90 --param steps=5
lionstone fx apply $P frost-panels --
source 20-32 --param panels=3
```

Tech / AI explainer

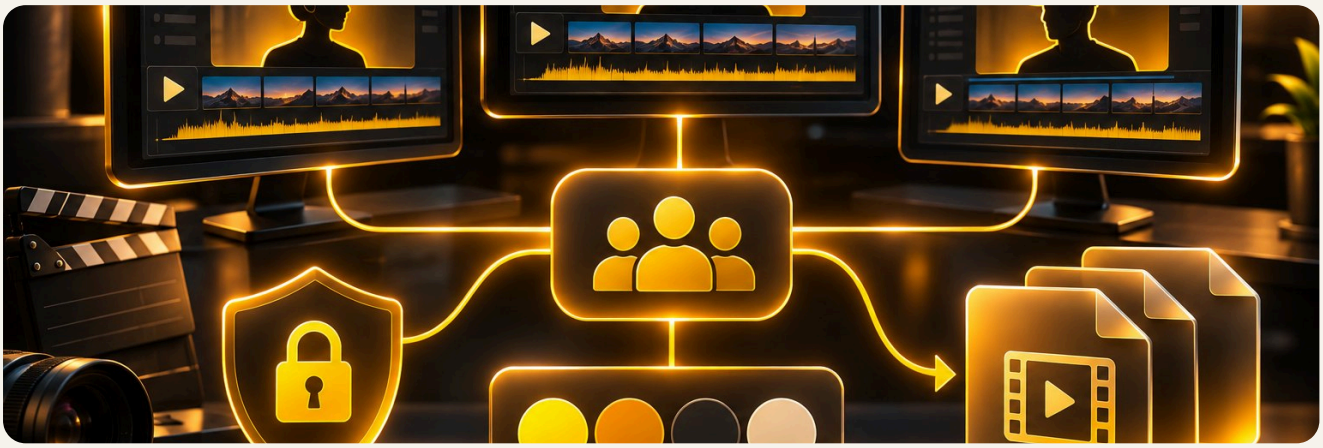

Cool grade, a scanning beam on the reveal.

```
lionstone fx apply $P look-steel-blue --
global
lionstone fx apply $P scan-line --source
12-13.7 --param speed=0.6
```

Not sure? `lionstone fx auto plan.json --content vlog --style social --dry-run` proposes a consistent set with a reason for each choice. Content: podcast, interview, talk, lecture, real-estate, product, vlog, music, corporate. Styles: cinematic, minimal, energetic, documentary, social.

12

Beyond the Reel

Concept illustration: shared brand kit, roles, locked presets and project hand-off.

COMMAND	WHAT IT DOES
`lionstone fx auto`	The Lionstone Agent proposes one look, emphasis zooms and transitions on real topic changes, with a reason for each.
`lionstone clips plan.json -n 5`	Finds self-contained moments with a strong first line; renders 9:16 with face tracking, a hook title and word-highlight captions. `--llm` re-ranks with your own Claude API key.
`lionstone multicam`	Syncs cameras and mics on audio, catches clock drift, gates mic bleed and cuts to the active speaker.
`lionstone style learn a.mp4 b.mp4`	Learns cut rhythm, pauses, loudness and colour from videos you like; reuse it on new edits.
`lionstone variants talk.mp4`	Natural, cinematic and dynamic edits side by side.
`lionstone export plan.json`	FCPXML 1.10 for DaVinci Resolve and Final Cut Pro, CMX3600 EDL for Premiere Pro, pointing at your original media.
`lionstone brand create kit.json --team`	Brand kit: colours, licensed fonts, logo, lower third, CTA, end card, signature look and transition.
`lionstone team init "ACME"`	Roles (viewer, editor, admin, owner) in a shared folder or git repo; nothing is uploaded.
`lionstone preset save … --team --locked`	Versioned team presets with history and revert; locked ones only admins change.
`lionstone fx batch <id> projects/*/plan.json`	One look or transition across a whole season.
`lionstone mcp`	MCP server: Claude, Cursor or any MCP client can plan, review and render edits.

13

Rules, QA & honest limits

The effect budget

- At most **one main + one helper effect** at the same moment.
- Never two **high-cost** effects overlapping (`pixel-resolve` and `stabilization` are high-cost).
- Effects ramp in and out inside their window and never animate outside it.
- Flash limit: no more than **3 flashes per second**; glitch effects are capped to match.

QA before delivery

Every render is decoded end to end and checked for A/V sync, black and frozen frames, EBU R128 loudness and true peak, clicks at every join and caption timing. Pro adds stale plans, flashes, exposure, saturation and graphics covering faces (with `lionstone[vision]`).

> **Skipped is not passed.** A check that can't run is reported as skipped, never as passed.

Honest limits

- `frost-panels` and `insight-split` use fixed, face-safe positions for a centred speaker; they don't track faces.
- `halo-orbit` is drawn in front of the speaker (no depth sorting).
- `afterimage` needs movement and bright areas.
- Brand colours are parameters set by brand kits, not read from the video.
- Two-clip cross dissolves, particles and subject masking are **planned**, not shipped.
- Text presets need FFmpeg with `drawtext`.
- Remotion-quality titles P01–P06 need Node.js 18+ and `cd remotion && npm ci`; otherwise FFmpeg fallbacks are used.

Privacy

Lionstone runs locally and works offline. Your footage is not uploaded; team workspaces live in a folder or git repo you control. Only `clips --llm` calls an API, with your own key.

A real QA report: the chapter 10 Reel

```
QA report: reel.edit.mp4 · Deliverable: yes
✓ decode_full      every frame and audio packet decoded without errors
✓ av_length        video/audio length difference 0 ms
✓ format           1080x1920 @ 30.000 fps (target 1080x1920 @ 30.0)
✓ loudness         -14.0 LUFS (target -14.0 ±1.0)
✓ true_peak        -5.8 dBTP (ceiling -1.0)
✓ join_clicks      inspected 5/5 joins, 0 suspicious
✓ fx_rendered      12 applied, 0 skipped
✓ flicker          max 0 strong flashes in any 1 s window (limit 3)
✓ graphics_rules   3 graphics · overlaps 0 · too short 0 · outside video 0
- caption_timing   skipped: no transcript (the test clip has no speech)
- faces_covered    skipped: needs pip install "lionstone[vision]"
```

Excerpt. The full report is written next to the video as `qa.md` and `qa.json`.

The 12 Reel FX at a glance

`stage-light` `press-mono` `frost-panels` `duotone-pop` `scan-line` `afterimage` `halo-orbit` `neon-outline` `insight-split` `brand-frame` `progress-rail` `pixel-resolve`

Pick by goal

YOU WANT TO…	REACH FOR
Stop the scroll in the first second	`pixel-resolve` · `duotone-pop` · `word-pop`
Land the one sentence that matters	`stage-light` · `quick-punch-in`
List takeaways or steps	`frost-panels` · `progress-rail` · `phrase-build`
Prove it with numbers	`insight-split` · `counter-up` · `stat-emphasis`
Make it feel techy	`scan-line` · `neon-outline` · `look-steel-blue`
Quote someone	`press-mono` · `look-classic-bw`
Brand a whole series	`brand-frame` · brand kit · locked team preset
End with an action	`cta` · `end-card`

One agent. A complete workflow.
